

C# Comments – Single and Multi Line – Examples

C# Comments

Comments are part of the program that are not executed, but increase the readability of the program.

You can write comments in C# in two ways based on the number of lines. They are:

- Single Line Comments
- Multi-line Comments

Single Line Comments

Two forward slashes `//` are used to define a single line comment. Anything that comes after double slash `//` is considered a comment. A single line comment alone can exist in a single line or it can come after a statement.

Program.cs

```
using System;

namespace CSharpExamples {
    class Program {
        static void Main(string[] args) {
            //this is a single line comment
            Console.WriteLine("Hello TutorialKart"); //this is also a comment
        }
    }
}
```

Output

```
Hello TutorialKart
```

If a program statement is commented, it will not be executed.

Program.cs

```
using System;
```

```
namespace CSharpExamples {
    class Program {
        static void Main(string[] args) {
            //Console.WriteLine("Hello World");
            Console.WriteLine("Hello TutorialKart");
        }
    }
}
```

Output

```
Hello TutorialKart
```

The first `Console.WriteLine` statement is commented, hence not executed.

Multi-line Comments

Multi-line Comments can span across one or more lines. `/* your multiline comment */` is the syntax of a multi-line comment.

Program.cs

```
using System;

namespace CSharpExamples {
    class Program {
        static void Main(string[] args) {
            /* This is
               a multi-line
               comment */
            Console.WriteLine("Hello TutorialKart");
        }
    }
}
```

Output

```
Hello TutorialKart
```

You can comment a set of statements using multi-line comment.

Program.cs

```
using System;

namespace CSharpExamples {
    class Program {
        static void Main(string[] args) {
            Console.WriteLine("Hello TutorialKart");
        }
    }
}
```

```
        Console.WriteLine( "Hello TutorialKart" );  
        /* Console.WriteLine("Hello World");  
        Console.WriteLine("Hello User"); */  
    }  
}  
}
```

Output

```
Hello TutorialKart
```

Conclusion

In this [C# Tutorial](#), we learned how to write single line and multi line comments in C# and how to use them in different scenarios.
