

Flutter Tooltip Example

Flutter Tooltip

In Flutter, Tooltip widget is a material design tooltip used to let user know about the functionality of a button or UI action.

When a widget is equipped with tooltip, if user long presses the widget or some appropriate action on the widget, tooltip appears as a floating label.

Tooltip is usually used to increase the accessibility of your application, providing text based clues for visual based widgets.

Example – Flutter Tooltip

To provide tooltip for a button, surround the button with Tooltip.

In this example application, we take a FlatButton with Icon as child, i.e., a visual object. We shall surround this button with Tooltip. So, if you long press on this button, you will see a label with the message provided for Tooltip widget.

main.dart

```
import 'package:flutter/material.dart';

void main() {
  runApp(MyApp());
}

class MyApp extends StatefulWidget {
  @override
  _MyAppState createState() => _MyAppState();
}

class _MyAppState extends State<MyApp> {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: Scaffold(
        appBar: AppBar(
          title: Text('Flutter Tooltip - tutorialkart.com'),
        ),
        body: Center(
          child: Column(children: <Widgets>F
```

```

        child: Column(children: <widgets>[
Container(
  margin: EdgeInsets.all(10),
  child: Tooltip(
    message: 'My Account',
    child: FlatButton(
      child: Icon(
        Icons.account_box,
        size: 50,
      ),
    )),
  ),
  ]))),
);
}
}

```

Long press on the icon to show tooltip.

Conclusion

In this [Flutter Tutorial](#), we learned how to use Flutter Tooltip widget to provide accessibility to widgets.
