

How to find Length of Range Object in Python?

Python – Length of Range

To find the length of a range in Python, call `len()` builtin function and pass the range object as argument. `len()` function returns the number of items in the range.

Reference – [Python len\(\) builtin function](#)

In the following example, we will take a range, and find its length using `len()` function.

Python Program

```
rangeObject = range(2, 9)
length = len(rangeObject)
print(f'Length of this range is {length}.')
```

Output

```
Length of this range is 7.
```

In the following example, we will take a range with a step value of 2, and find its length using `len()` function.

Python Program

```
rangeObject = range(2, 9, 2)
length = len(rangeObject)
print(f'Length of this range is {length}.')
```

Output

```
Length of this range is 4.
```

Conclusion

In this [Python Tutorial](#), we learned how to find the length of Python Range object using `len()` function, with example program.
