

Profiles in Salesforce | Salesforce profiles

Profiles in Salesforce | Salesforce profiles

Profiles in Salesforce is a collection of Settings and permissions that define how a user access records. Using profile we can assign [Field Level Security](#) for [Objects](#), Users permissions, fields, tab settings etc.

What does a profile Control?

Profiles in Salesforce controls the following.

1. **Page layouts** :- Which page layout the user has to see.
2. **Field Level Security** :- Using field level security we can restrict user to Create, Read, Edit and delete fields.
3. **Custom apps** :- Which standard and custom apps the user can view.
4. **Tabs** :- Which tabs the user can view.
5. **Record types** :- Which record types are available to user.
6. **Login** :- Login IP and [Salesforce login](#) Hours restrictions can be made t users.

Different Profiles in Salesforce.

There are two types of Profiles in Salesforce. They are

1. Standard Profiles.
2. Custom Profiles.

Standard Profiles :- Standard Profiles in Salesforce are defaultly created with force.com which cannot be renamed or deleted.

Standard profiles which are used most frequently in SFDC are

1. **System Administrator** :- System administrator is the super user and can customize every application in an organization.
2. **Standard User** :- Standard user can View, Edit and delete their own records.
3. **Read Only** :- Can only view records.
4. **Solution Manager** :- Solution manager can customize standard user permissions, published solutions and solutions categories.
5. **Marketing User** :- Marketing user can import organization leads and have all standard user permissions
6. **Contract Manager** :- Contract manager can edit, approve, activate and delete contracts and also have all standard user permissions.

Custom Profiles :- Custom Profiles in Salesforce are defined by user. These profiles can be edited and deleted.

Navigating to Profiles in Salesforce.

Profiles in Salesforce can be accessed from [Administer](#) | [Manage users](#) | [Profiles](#).

Relationship Between User and a Profile

What is the relationship between user and a profile? Whether it is one to many or many to many relationships. It is one to many relationship between profile and a user. A profile can have many users but a user must have only one profile assigned.
